

## MoldMan™ 4000 : Presentation

The Moldman™ 4000 is ideal for prototyping and lower volume production quantities. This manually operated machine offers all the processing features needed to over-mold almost any type of circuit board, connector and strain relief.

The Moldman™ 4000 is equipped with our proprietary pressure control system. This system controls volume and pressure independent of each other providing the flexibility to over-mold complex circuit boards and connectors.

Why chose a Moldman™ Machine?

Moldman™ Machines are designed exclusively for Low Pressure Molding. Focused on user friendliness, long service life and minimal maintenance. They are integrated, purpose built LPM machines, designed without maintenance intensive items.

- No heated hoses
- No exposed heated joints
- No exposed moving injection nozzles

The Moldman™ 4000 is CE Certified.
